

# Environmental Compliance. Erosion Control. Stormwater Management.

Three phrases that can make any contractor cringe. With the advent of new regulations mandated by the Environmental Protection Agency and the State Department of Ecology, construction contractors throughout the Puget Sound region are now, more than ever, faced with a daunting gauntlet of rules and restrictions that demand continuous vigilance before and throughout construction. Once thought of as a minor paperwork exercise, inspections and fines for non-compliance have raised the level of scrutiny on even small project sites.

How can you ensure that your project schedule doesn't get waylaid by environmental requirements? Contact the team of professionals responsible for the success of the Seattle-Tacoma International Airport's Third Runway project and Sound Transit's high-profile Airport Link ... WHH Construction.

## Planning

Regardless of your project's size or complexity, WHH Construction's staff of registered professional engineers and certified erosion and sediment control professionals makes planning your project's storm-water management simple, efficient, and cost-effective.

## Inspection & Monitoring

Drawing upon the expertise of recognized industry professional George Hubbard, CPESC\* and his established relationships with the Department of Ecology, WHH Construction offers comprehensive oversight services for your project, regardless of size. Whether acting as an independent inspector, a full Erosion and Sediment Control (ESC) Lead, or simply serving as a project advisor, Mr. Hubbard's thorough understanding of today's stringent state and local requirements and a solid background as an Operating Engineer combines technical knowledge with the common sense construction demands to help guide your project through the maze of current compliance regulations.

\* Certified Professional in Erosion and Sediment Control #4556, as issued by CPESC, Inc. Mr. Hubbard is also an accredited member of the International Erosion Control Association (IECA).

## Implementation & Maintenance

With its staff of construction experts grounded in earthwork and utility construction throughout the Puget Sound led by a cadre of construction management professionals with over sixty years of experience in implementing and maintaining environmental compliance systems, WHH Construction is the right choice for the installation and maintenance of your project's Best Management Practices (BMPs), whether as simple as silt fence or check dams or as complex as Chitosan-Enhanced Sand Filtration (CESF) units. Through strategic partnerships with key members of the erosion control contracting and supply communities, WHH should be your first and only choice for environmental compliance plan implementation.

Whether your project demands planning, implementation, monitoring, or any combination of the key aspects of erosion control and environmental compliance, make the right choice for your project's success.
